

Research:

The focus of our technological developments is concentrated mainly in the fields of:

- Hydrogen Production, Storage & distribution related process and materials development
- Hydrogen Fuel Cell and its components
- Waste gas cleaning
- Waste to energy
- Production of various chemicals
- Reuse of by-products and waste streams from industrial processes

Our R&D activities include the following tasks:

- Evolution of new and innovative technologies
- Development of customized special solutions
- Pilot plant development
- Development and optimization of Unit Operations
